ZERO TO HERO: PROTECTING PATIENTS AND EXPANDING PRODUCT DETAILS

Amy & Madeline Wooldridge | Censis Technologies

Hey Super People Departments!

We have spoken a lot about defeating the villain of your Sterile Processing Departments, Dirty Data, so we are going to take a break to discuss our true number one priority, protecting the citizens of your hospital, the actual patients (and their data). There are a couple ways to boost your data utilization across multiple areas of your SPD that fit into two categories, **assembly** and **sterilization**.

During assembly, many superheroes do not take advantage of features in their electronic tracking software that tell their technicians everything they need to know about maintaining and reprocessing their physical instruments. Find out if your team is appropriately documenting when an instrument is ready for maintenance, retirement, removal, or replacement. Are the number of uses until an instrument needs maintenance updated? Are integrity testing reminders enabled? Is the warranty expiration date recorded? What about the cost of the instrument? Do your instruments have special handling requirements updated in the tracking software? If not, now is the time to boost your data utilization! Sterilization has data utilization needs as well. Do all your instruments have updated primary sterilization methods? Are those methods correct? What about alternate methods? If not, it's time to boost your data utilization!

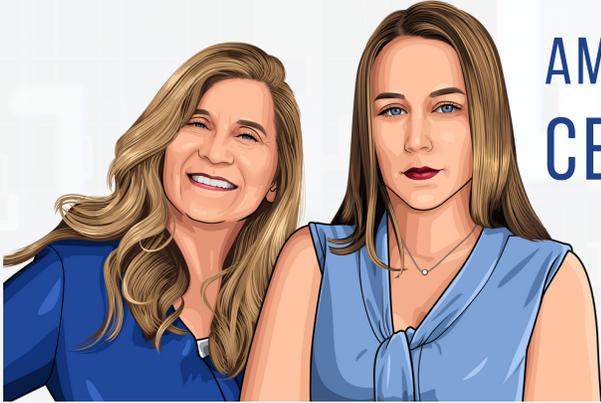

PPE up and scour your software for opportunities to amplify your maintenance and reprocessing product details. Your hospital's citizens will be safer - your team members will have increased accountability - your instruments will be more reliable. You can rest easy knowing the public is protected while you continue to prepare for the fight against Dirty Data.

Stay clean!

-Madi and Amy

Beyond Clean Instrument Data Experts Biography:

AMY & MADELINE WOOLDRIDGE CENSIS TECHNOLOGIES

*For more information about surgical
instrument data & tracking, contact:*

Marketing@censis.com

Madeline Wooldridge is a Business Analyst for Censis Technologies, Inc. Based in Tennessee, Censis is the industry leader in surgical instrument management systems and offers advanced, web-based software systems. She specializes in serving clients' Data Optimization needs. Originally intending to attend medical school, she earned her Bachelor of Science in Psychology with a pre-medicine focus, while her professional workload consisted of customer service management and optimizing surgical instrument tracking data. Madeline joined the Censis Data Team full time more recently to help clients reach their maximum potential for data integrity. She is passionate about teaching, idea-to-process execution, and alternative problem solving. Madeline works alongside Amy Wooldridge, who earned her Bachelor of Science in Management Information Systems. Amy was a trailblazer for systems engineering and process improvement at EDS and managed several accounts at Apple prior to joining Censis Technologies. With increased productivity and accountability in mind, she created the Data Optimization service for Censis clients. She is passionate about research and data analysis. For the last few years, the mother-daughter duo has used their super power to provide hospitals with accurate and efficient instrument data together.
