THE SPD DETECTIVE FINDING CLUES IN CHEMICAL LABELS - PART I

Peggy Spitzer, AAS, BA, MA.Ed.

Clinical Education Manager, Certol International

It's time to be a Sterile Processing Detective! Although chemical labels are not as fun to read as a good mystery novel, there are plenty of clues to follow for safe and correct use.

Detergents have minimal regulation in the U.S. as an FDA Class 1 Medical Device so the manufacturer has more leeway on label formatting and content. The product name may offer clues such as "Enzymatic" or "Neutral". Use other sources including the product Safety Data Sheet to determine appropriate use.

An important clue on detergent chemical labels will help answer a question frequently posed by surveyors: "What is the IFU (instructions) for this detergent?" The surveyor may want to know if the technician can state the correct dosing, contact/soak time and temperature.

For most medical grade instrument detergents, the product label is the primary IFU / instruction resource. The chemical manufacturer should state basic instructions on the product label including dosing and correct temperature. If this vital information is minimal or missing, contact the manufacturer immediately before starting use of the product.

It may not be practical to read the tiny print on a label during a shift, so after a detergent is adopted for use, the label and technical guides from the manufacturer may be used and referenced for enlarged laminated wall charts and staff training.

With training and return demonstrations, technicians will feel confident using chemicals while avoiding the common error of referring to products as the "blue stuff".

Beyond Clean Enzymatic Expert Biography:

PEGGY SPITZER, AAS, BA, MA.ED.

**CLINICAL EDUCATION MANAGER
CERTOL INTERNATIONAL**

Peggy Spitzer is a Colorado native with over 30 years of combined experience as a healthcare provider, college faculty and clinic manager. Currently she is clinical education manager at Certol Intl., a manufacturer of detergents and disinfectants for healthcare. She develops and presents education programs to hospital and dental professional groups focusing on infection prevention, instrument processing and best practices for chemicals. Peggy is a past president, past secretary and current treasurer of the Rocky Mountain Central Sterile Chapter promoting education and certification for Sterile Processing professionals. She is an active speaker for APIC and Sterile Processing professional groups and consultant to the Colorado State Dental Board. A special highlight was speaking at the national IAHCSSMM convention in 2019.
